Dear Scott,

Thank you very much for your interests in our research. Here I attached the compiled input dataset and the updated R code of our recent publication (https://www.sciencedirect.com/science/article/abs/pii/S0304389423022033).

The code should be working with large dataset if your data comply with the input format (in the excel file). If you still have questions running the code, you can print screen the error and send it to me, I'll try to help you with that.

Happy holidays and wish you a nice start of the new year!

Best regards
Tong

Hi Tong,

I'm running into some issues with the PSSD code published on EMPA's github (https://github.com/empa-tsl/PSSDplus). The code works for very small datasets, but runs into critical errors whenever the dataset is larger than a few dozen rows. Do you have updated code available for this that you could please share with me?

Thank you!
